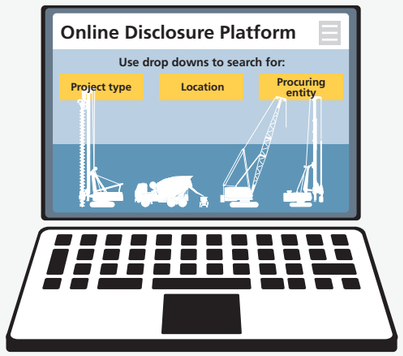
CoST Assurance: Step-by-step

Infrastructure Transparency Initiative

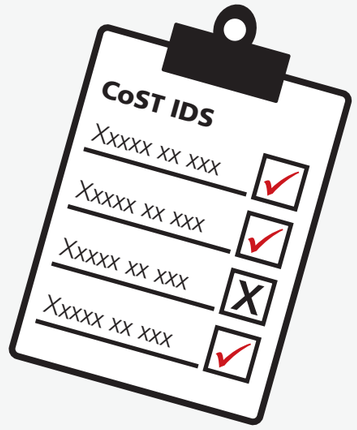
1 **Procuring entity** discloses clear & comprehensive infrastructure data

2 **Data** is disclosed on user friendly websites and other channels



Independent experts appointed by a multi-stakeholder group form an **assurance team**

3 **Assurance team** checks accuracy and completeness of disclosed data

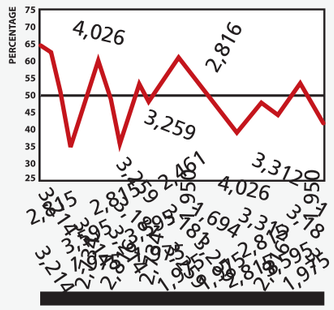


4 A **sample of projects** is identified for in-depth review

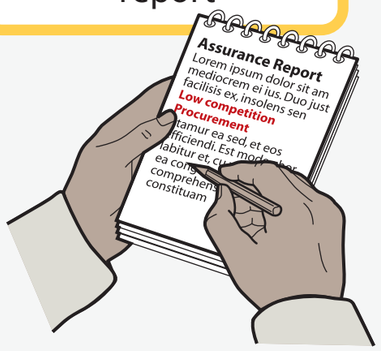
5 Assurance team **requests missing data** & additional information

6 Assurance team **visits construction site** to observe progress & ask questions

7 Assurance team **turns data into compelling information**, highlighting concerns & good practice



Stakeholders can access infrastructure data & key messages from an assurance report



8 **Projects are recommended** for further review
